

Video abstract storyboard

Clinical cohort study · 2:30 runtime · 6 beats · 370 words of voiceover

This is a redacted sample. It shows the structure and level of detail of a real deliverable. Client names, journal names and identifying particulars have been removed or changed. Ask us and we will send one built around a manuscript like yours.

The script, approved before anything was animated

A five-thousand-word paper becomes about 370 words, because a professional read runs near 150 words a minute. The order is built for a viewer, not a reader: question first, finding early, method only as far as it earns trust.

Beat	Time	On screen and said
1 · Hook	0:00–0:12	The clinical question as a single line. No logo, no title recital — there are about eight seconds before a viewer scrolls.
2 · The gap	0:12–0:35	What was unknown and why earlier work stopped where it did. Two sentences, not a literature review.
3 · Method	0:35–1:10	Three numbers as counters, then the design in one line. Enough to trust the result, not enough to replicate it.
4 · Findings	1:10–1:55	The longest beat. Headline number first and alone; the curve builds on afterwards, line by line.
5 · Meaning	1:55–2:20	The implication in one sentence, with the limitation on screen beneath it rather than buried in narration.
6 · End card	2:20–2:30	DOI, journal, licence, funder, contact — held eight to ten seconds so it can be read or screenshotted.

Checks run against the published article

Check	Result
Numbers on screen	Every effect size, interval and denominator checked word for word against the paper.
Claims	No causal language the paper does not use. One line softened from “reduces” to “was associated with”.
Primary outcome	The video leads on the pre-specified primary endpoint, as the registration defines it.
Declarations	Funding, competing interests and registration number on the end card, held long enough to read.
Consent	A patient photograph in Figure 3 was replaced with an illustration — consent covered the paper, not video use.

Nothing is animated until you approve the script. A sentence changed here costs nothing. The same sentence changed after the voiceover is recorded costs a re-record and a re-animate.

Delivered

- Master MP4 at the journal's specification, captions burned in
- A clean version without burned-in captions, for other uses
- Square (1:1) and vertical (9:16) cuts, retimed rather than cropped
- SRT and VTT subtitle files, timed to the voiceover
- The voiceover as a separate WAV track, and the music bed separately
- The storyboard as PowerPoint, plus the approved script and a full transcript
- A still frame from each scene, for slides and posters
- Project files, so the video can be updated rather than remade
